Figure 10 is a line graph titled "Detection Probability vs. Bug Position". The x-axis is labeled "Bug Position" and ranges from 0 to 15000. The y-axis is labeled "Detection Probability" and ranges from 0.0 to 0.8. There are three data series: CWE-22 (solid purple line), CWE-89 (dashed teal line), and CWE-79 (dashed yellow line). All three series show a decreasing trend in detection probability as the bug position increases. CWE-22 and CWE-89 start at a detection probability of approximately 0.6 at bug position 0, while CWE-79 starts at approximately 0.3. By bug position 15000, all three series converge to a detection probability of approximately 0.05.

Bug Position	CWE-22	CWE-89	CWE-79
0	0.60	0.60	0.30
5000	0.20	0.20	0.20
10000	0.05	0.05	0.10
15000	0.05	0.05	0.05

Legend:

- CWE-22
- CWE-89 ($p=0.704$)
- CWE-79

Figure 1: Distribution of bug positions. The graph shows the frequency of bugs at different positions for three CWE categories. CWE-22 (solid purple line) has the highest frequency, followed by CWE-89 (dashed teal line) and CWE-79 (dotted yellow line). All three show a decreasing trend as bug position increases.

Bug Position	CWE-22 (p=0.247)	CWE-89 (p=0.064)	CWE-79
0	~85	~95	~65
5000	~65	~60	~45
10000	~55	~45	~35
15000	~45	~35	~25

Line graph showing the relationship between Bug Position (X-axis, 0 to 15000) and three CWE categories (Y-axis, unlabeled). The graph displays three data series with shaded confidence intervals:

- CWE-22 ($p=0.081$)** (Purple solid line): Shows a decreasing trend, starting high and ending low.
- CWE-89** (Teal dashed line): Shows a decreasing trend, starting high and ending low.
- CWE-79** (Yellow dash-dot line): Shows a decreasing trend, starting lower than the others and ending low.

The shaded regions represent confidence intervals, indicating the uncertainty in the data. The X-axis is labeled "Bug Position" and ranges from 0 to 15000. The Y-axis is unlabeled but represents a metric that decreases as Bug Position increases.

A line graph showing the distribution of bug positions for three CWE categories: CWE-22 (purple solid line), CWE-89 (teal dashed line), and CWE-79 (yellow dash-dot line). The x-axis represents 'Bug Position' from 0 to 15,000. The y-axis represents frequency. CWE-22 shows a relatively flat distribution, while CWE-89 and CWE-79 show a sharp decline in frequency as the bug position increases.

Bug Position	CWE-22 ($p=0.128$)	CWE-89	CWE-79
0	~100	~80	~40
5000	~80	~40	~20
10000	~60	~20	~10
15000	~40	~10	~5

Line graph showing Bug Position (Y-axis, 0 to 100) versus Bug Position (X-axis, 0 to 15000). The graph displays three data series representing different CWE categories:

- CWE-22** (Solid purple line): Starts at approximately 95 on the Y-axis and decreases to approximately 45.
- CWE-89 (p=0.642)** (Dashed teal line): Starts at approximately 85 on the Y-axis and decreases to approximately 75.
- CWE-79** (Dashed yellow line): Starts at approximately 65 on the Y-axis and decreases to approximately 35.

The legend indicates the line styles and colors for each CWE category.
