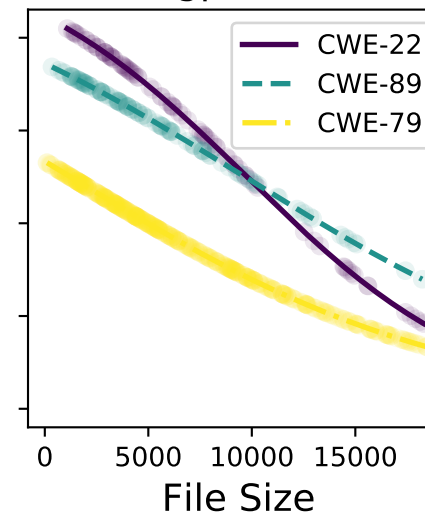

Figure 10 is a line graph titled "Detection Probability vs. Bug Position". The x-axis is labeled "Bug Position" and ranges from 0 to 15,000. The y-axis is labeled "Detection Probability" and ranges from 0.0 to 0.8. There are three data series: CWE-22 (solid purple line), CWE-89 (dashed teal line), and CWE-79 (dash-dot yellow line). CWE-22 and CWE-89 start at a detection probability of approximately 0.6 at bug position 0 and decrease as the bug position increases, with CWE-22 generally having a slightly higher probability than CWE-89. CWE-79 starts at a lower detection probability of approximately 0.3 at bug position 0 and also decreases as the bug position increases, remaining below the other two series.

The graph displays the number of bugs found by three CWE categories across different bug positions (0 to 15,000). The y-axis represents the number of bugs, ranging from 0 to 15. The x-axis represents the Bug Position, ranging from 0 to 15,000. CWE-22 (solid purple line) shows a sharp decline in the number of bugs found as the position increases. CWE-89 (dashed teal line) and CWE-79 (dash-dot yellow line) show a more gradual decline. The legend indicates that the p-value for the comparison between CWE-89 and CWE-79 is 0.648.

Bug Position	CWE-22	CWE-89 (p=0.648)	CWE-79
0	14	12	10
5000	8	11	7
10000	4	10	4
15000	2	9	3

Line graph showing Bug Position (Y-axis) versus Bug Position (X-axis). The X-axis ranges from 0 to 15000, and the Y-axis ranges from 0 to 15000. Three data series are plotted:

- CWE-22 ($p=0.117$) (Purple line)
- CWE-89 ($p=0.075$) (Teal line)
- CWE-79 (Yellow line)

All three series show a decreasing trend as Bug Position increases. CWE-22 and CWE-89 start at high Bug Position values (around 12000 and 13000 respectively) and decrease towards 10000. CWE-79 starts at a lower Bug Position value (around 8000) and decreases towards 6000.

The graph displays the frequency of bugs at different positions for three categories: CWE-22, CWE-89, and CWE-79. The x-axis represents the 'Bug Position' from 0 to 15000, and the y-axis represents the 'Frequency' from 0 to 100. CWE-22 (purple solid line) consistently shows the highest frequency, starting near 100 and decreasing to about 40. CWE-89 (teal dashed line) starts around 80 and decreases to about 10. CWE-79 (yellow dash-dot line) starts around 60 and decreases to about 5. All three categories show a clear downward trend as the bug position increases.

Bug Position	CWE-22 Frequency	CWE-89 Frequency	CWE-79 Frequency
0	~100	~80	~60
5000	~70	~40	~30
10000	~50	~15	~10
15000	~40	~10	~5

Figure 10: Distribution of bug positions. The graph shows the distribution of bug positions for three CWE categories: CWE-22 (purple solid line), CWE-89 (teal dashed line), and CWE-79 (yellow dash-dot line). The x-axis represents the Bug Position (0 to 15000). CWE-22 shows a high frequency of bugs at low positions, decreasing as the position increases. CWE-89 shows a more uniform distribution across the range. CWE-79 shows a lower frequency of bugs at low positions, increasing as the position increases.
